

Most AI portfolios are powered by vastly inferior math.

SAGE MPW provides superior math — Training at $O(n)$. Inference at $O(n \log n)$.

01 AI breakthrough — it's just math

Quadratic cost drops to linear for training and near-linear for inference.

TRAINING

$$\Theta(n^2) \rightarrow O(n)$$

INFERENCE

$$\Theta(n^2) \rightarrow O(n \log n)$$

02 Market implications

a ~~GW~~ → kW

Kilowatts instead of gigawatts

Data-center power and capital requirements fall by orders of magnitude — **greener compute**, with planetary-scale benefits.

"The best data center is the one you do not need to build."

— PC

b **Train + infer** on battery

Battery-powered devices do both in near real time

Personal and sovereign AI: own your inference instead of renting it from untrustworthy partners.

Smartphones

Smart infrastructure

03 Track record — who you are betting on

Paul Charlton

Inevitable Systems · founder and technical lead

Three decades building the hidden system layers that let computing cross its hardest thresholds: ubiquitous digital video, Java across devices, routers across cores, filesystems across operating systems, institutions across cloud.

Apple QuickTime · Sun Java2D · Cisco IOS multicore · Intuit QuickBooks · SGI CXFS · HP storage · DHS cloud · Global-scale IoT
